Questions?

Inquire with your school administration or contact Stevens County Human Services to receive more information.

**CLINICAL MENTAL
HEALTH SERVICES**

Our Services

Diagnostic Assessment

For all ages, a diagnostic assessment (DA) is a written summary of an evaluation by a mental health professional and is an essential component in identifying appropriate and culturally specific service needs. Referrals for a diagnostic assessment or ongoing clinical mental health services can be made by calling our agency's intake worker and requesting the service, or by communicating with our Stevens County case managers.

Therapy

Stevens County Human Services offers therapeutic services including individual, couple, group, and family therapy. Sessions vary according to need and situation. Interventions aim for an acceptable level of stability, wellness, conflict resolution, and healthy relationships for those involved in the service.

School-Linked Mental Health Services

For ages 0 to 21, regardless of insurance or financial status. Individuals who are enrolled in Morris Area, Chokio-Alberta and Hancock School Districts are eligible. The goal is to improve identification of mental health issues and provide appropriate supports to children and youth in the school setting. Teacher & administration consultation, care coordination, and various trainings opportunities are also available.

Telehealth Therapy

For individuals receiving therapy we offer telehealth services through a secure, live video connection over the internet. Telehealth services provide assessment, diagnosis and treatment. Visits address emotional and psychological needs. Sessions vary according to need and situation. Individuals benefit from access to care from their homes with more options for safety, privacy, flexibility and convenience.
